Stemwede-Levern - KKC Koffer, a renowned supplier of case solutions for the B2B, held a symbolic ground-breaking ceremony on 23 November at 3 p.m. for the construction of a new, future-oriented production and storage facility in Stemwede-Levern. The ambitious construction project is to be completed within a year.

With an investment of 4 million euros, the company is planning not only to expand its production capacity but also to create additional office and storage space. The more than 2400 square metres, will be seamlessly integrated with the existing building to increase efficiency, according to the management of KKC Koffer GmbH.

Martin Chalupa, Managing Director of KKC Koffer GmbH, emphasised the importance of the project: "The start of our hall extension not only marks the physical expansion, but also our way into the future. We are focusing on efficiency and innovation through automation in order to the skills shortage. As a training company, we are creating space and perspectives for young talents, while the extended hall provides space for our employees and optimised processes".

The mayor of Stemwede, Kai Abrusztat, was positive about the impact of the investment on the local community: "We are very pleased that KKC is standing up for the location in Levern and is investing in Stemwede. We are proud that KKC belongs to our community".

Ralf Holzhauer, graduate engineer at HMS Industriebau, expressed his enthusiasm about the cooperation: "We are delighted with this order and appreciate KKC's trust in the expertise of HMS Industriebau. We are looking forward to complete the expansion of KKC's new production and warehouse extension".

Bernd Dammeyer of Dammeyer Ingenieure added: "After an exciting planning phase the construction of KKC's new production and warehouse building has now started. We at Dammeyer Ingenieure are looking forward to meeting these challenges and laying a solid foundation for the future".

Thanks to this expansion, KKC Koffer will be able to meet all future storage needs internally. The new facilities will also include a modern production line for the production of the popular "Pegar" aluminium cases, which will make the production process even faster and more efficient.

KKC Koffer continues to pursue its vision of sustainable business development - with a strong focus on capacity expansion and process optimisation to secure the site.

A brief introduction:

Since 1986, KKC Koffer GmbH has been a pioneer in the manufacture of case and container solutions for business customers. With deep roots in the company's history, the company stands for top quality case production that meets the latest technological requirements and can be supplied in any quantity and with minimum lead times. Particularly noteworthy are the sustainable production in Germany, highly developed machinery and perfected manufacturing processes. On this stable basis, the company produces customised B2B case solutions that are characterised by precision and the highest quality.
