

# WATERPROOF-S

Unbreakable, waterproof transport cases  
with lifelong guarantee

## WATERPROOF-S

### WATERPROOF-S

The waterproof and unbreakable cases made in the United States. Companies all over the world trust in these unbreakable cases - from the military to the oil and shipping industry up to the electrical industry and machine construction.

The large number of the available case sizes offers a solution for nearly every use of application. The waterproof casing made of polypropylene will be completed with professional foam fittings, produced at KCC.

Besides their extreme stability the cases are UV resistant and furthermore they are resistant to solvents. The cases could be used on land, on water and in the air thanks to the fully automatic 2-way pressure compensating valve.

Mobility and interior design are individually adaptable (see p. 51 and following pages).

W/D/H (mm) Inside dimensions	Colour	Article No.
234 x 180 x 75+30	black	421300.00
249 x 177 x 125+30	black	421301.00
305 x 229 x 76+38	black	421302.00
381 x 264 x 108+44	black	421303.00
406 x 254 x 89+50	black	421304.00
432 x 292 x 108+44	black	421305.00
470 x 330 x 82+38	black	421306.00
470 x 330 x 139+38	black	421307.00
520 x 292 x 159+50	black	421308.00
520 x 393 x 140+50	black	421309.00
558 x 432 x 153+50	black	421310.00

### Solutions in detail.

The carrying handle is coated with a padding material and fits perfectly in hand. When folded down, the handle is locked into place and does not rattle during transport.

# WATERPROOF-S

## WATERPROOF-S with rollers

From a certain size on it is almost indispensable to arrange the transport of the products in the case comfortably and, with the help of roller systems, easily to handle.

Of course the roller systems which are used for the cases of the product line Waterproof-S with rollers are especially made for rough and tough use. The permanent functionality is the quality standard and guarantee for long-durability.

Mobility and interior design are individually adaptable (see p. 51 and following pages).

W/D/H (mm) Inside dimensions	Colour	Article No.
483 x 362 x 153+50	black	421350.00
520 x 292 x 140+50	black	421351.00
520 x 393 x 204+50	black	421352.00
558 x 432 x 217+50	black	421311.00
584 x 432 x 292+64	black	421353.00
737 x 457 x 292+64	black	421354.00
1080 x 368 x 102+38	black	421355.00
1282 x 368 x 114+38	black	421356.00

## Cylinder lock as set for Waterproof-Cases

By changing the lock the case content can be protected against unauthorized access. The cylinder lock set is for self-installation and consists of 2 cylinders including clasp and 2 keys.

Cylinder lock as set	Article No.:	Suitable for Article No.:
Size 1	421399.00	421300, 421301
Size 2	421399.01	421302, 421305, 421306, 421307
Size 3	421399.02	421399.02, 421303, 421304, 421308, 421350, 421351, 421352, 421353, 421354, 421355, 421356

## WATERPROOF-S

Case with individual foam fitting

## Components production

Perfect protection of the valuable content by using individually designed foam components. In addition to the water tightness according to IP 65 there is the advantage of safety of all-round protection. Because of our diverse possibilities of foam processing every option is possible. Even up to branding or specific individualization.

# Features

Mounting forms, technique and accessories

## Structural shapes

**S** Shopper

**R** Rack

**X** X-Case

**K** Case

**B** Box

**U** Uniport

**H** Hood

### Structural Shapes

Mechanical drawings or schematic diagrams are one thing. In conjunction with the reality, technique is sometimes easier to explain. For a better understanding of the structural shapes, we have faced some real examples.

## Structural Shapes

### **K** Case

This all-purpose case has a short production time. Individual solutions are possible on short notice.

### **R** Rack

The rack is the professional solution for transportation of measuring devices, either padded on all sides with foam or with an integrated front panel.

### **B** Box

The box is ideal for transporting high or tall products, with fewer bottom area and necessary height.

### **H** Hood

The hood is ideal for presentation contents. Completely protected from all sides, but totally accessible once removed. Especially functional for heavy equipment.

### **S** Shopper

The shopper has optimal flexibility for presentation / vendor uses with its foam inserts which can be individually formed to perfectly fit instruments and measuring equipment.

### **U** Uniport

The uniport is the perfect mix of case and box. Often preferred for measuring instruments or complex presentation uses. After opening the lid another front hatch offers even more accessibility to the contents.

### **X** X-Case

The x-case is the answer for the podium form presentation system. With two identical V-shaped halves this becomes the optimal presentation set.

## Mobility and Handle Systems for Boxes

**B1**

Retractable handle, permanently mounted on exterior.

**B1**

Rollers 150 mm wide with rubber gripping surface for optimal comfort even on uneven grounds. Retractable handle mounted permanently on side of case.

**B2**

Retractable handle, mounted in pivoting exterior mechanism.

**B2**

Corner rollers 40 mm mounted on exterior.

**B3**

Built-in retractable handle, permanently mounted.

**B3**

Built-in inliner wheels. Inconspicuously integrated with smooth rolling feature.

Handle systems B1 - B3 are able to be individually combined with roller systems B1 - B3.

**B4** **B4**

Trolley, retractable handle with integrated rollers. Removable with quick release lock. Mounted on back side of case.

**B5** **B5**

Trolley, retractable handle with integrated rollers. Removable with quick release lock. Mounted on bottom of case.

# Mobility and Handle Systems for Cases

Built-in retractable handle, permanently mounted. Due to compact construction, minimal space inside the case is lost.

Built-in inliner wheels. Inconspicuously integrated with smooth rolling feature.

Retractable handle, permanently mounted on exterior. The affordable handle solution to retain usable space in the case.

Built-in corner rollers 50 mm.

Retractable handle, permanently mounted on exterior. The affordable handle solution to retain usable space in the case.

Corner rollers 40 mm.

Retractable handle, permanently mounted on exterior. The affordable handle solution to retain usable space in the case.

Rollers, 150 mm wide, with rubber gripping surface for optimal comfort even on uneven grounds.

Retractable handle, permanently mounted on exterior. The affordable handle solution to retain usable space in the case.

Attached rollers with "fenders"-die-cast housing, roller diameter 80 mm. Designed for use with heavy contents. Especially sturdy construction.

**Handle systems K1 and K2 are able to be individually combined with roller systems K1, K2, K4, K5 and K6.**

Trolley, retractable handle, mounted on exterior. Removable with quick-release lock.

## Surfaces and Colours

### Standard, flexible or individual.

For each of the production lines we offer a wide variety of surfaces and material with standard cases. Within the framework of the designated range of surfaces, complete flexibility is possible.

With an eye for detail and your satisfaction as our goal, we'll always find the surface and colour solution that meets your every expectation.

With the understanding or the minimum quantity order, we "bend over backwards" to comply with your wishes.

### Light-weight building board

for PROFESSIONAL, PROWORKS, PROWORKS FLIGHT

The special light-weight honeycomb panel made of polypropylene is the ideal material to save on weight with larger cases, yet remains enormously sturdy.

Light-weight building board, Light-weight building board  
black grey

## Surfaces and Colours - for CARGO

### HDPE - Polyethylene plastics

This extreme robust and impact resistant plastic plate allows producing robust and break-proof transport packaging.

#### 8 colours are available as standard.

You could choose the colour for each box. This prevents confusion in day-to-day business.

#### Dichroism

This is feasible for some sizes (please ask for further information) and offers very interesting solutions for reusable packaging.

---

## Interior Design

The coordinated inner features turn a case into a professional instrument for daily use. Smooth foam protects valuable content. We have precisely the right material for every possible requirement.

For optimal application in cases only two quality materials are used: Soft foam (EF) and rigid foam (PZ/LD).

### Soft foam

Pliable foam from Polyurethane (PU) with a soft feel, e.g. nap foam is ideal for case padding and is relatively affordable in bulk purchase.

The colours range increment from light to dark-grey. Standard thicknesses are 20 / 30 / 40 mm.

---

### Rigid foam

The dense cellular, fine-poured foam made of plastazote (PZ) is ideal in presentation solutions because of its firmness.

By use of water-jet, milling or die-cutting, all of your products will rest securely in an exactly cut form. Colours in black, light-grey and light-blue offer many possibilities.

Standard PZ thicknesses are: 5 / 10 / 15 / 20 / 30 / 40 / 50 / 60 mm. Additional thickness can be attained by laminating layers of foam.

---

### Notched foam

This specialised foam worked in panels with pre-cut notches is the perfect solution for variable dividers in cases. Increments of 15 mm allow you to design the compartments of your case to your individual needs. If necessary the size and depth of increments can be altered.

## Processing of Foam

### Milling

Complete 3-dimensionality of the cut-outs can be achieved in one operation. Rigid foam pads are the inserts' basic material. The individual profile of the cut-outs is computer programmed and guided. Even different heights and depths are no problem within one cut-out. The programmed form can be identically repeated at any time.

Several incoming parts simulate the contour of the cut-outs. With the help of CAD programs the profile of all cut-outs will be identified. The ideal order of products or rather of cut-outs results from the CAD drawing.

The CNC-milling machine carves out the profile of the foam according to drawing. This form of insert can be identically repeated in bulk quantities. Quality remains the same.

## Technology and Processing

### Laser Engraving

The used machines make the direct labeling of the foams' surfaces possible. With this you will get the perfect product presentation as basis for a successful selling process.

Two-coloured milled foam insert

### Water-Jet Cutting

Absolute precision is achieved with water-jet cutting. Sharp, gentle or round profiles are perfectly formed. The different heights are achieved by craftsmanship.

### Form Cutting

The professional and of good value processing of flexible foam. Additional refining can be applied with flocking.

## Deep Recessed Inserts

Deep recessed inserts are an affordable alternative to foam. Despite the one-time machine set-up costs the unit costs can be kept low. When stability is needed for heavy tools or easy cleaning is required for presentation, this is the answer.

### Deep recessed inserts with smooth PVC

Deep recessed inserts of smooth, indelible PVC are the perfect solution when cleaning is necessary for medical instruments. Affordable, thin dividers are just the right thing for promotional and advertisement occasions. Thicker dividers are available for technical needs.

The standard colour is black; coloured and transparent inserts with textured or smooth surfaces are as well available.

### Flocked plastic deep recessed inserts

To give special value to your products, present them on a velvet-textured surface with a flocked finish. Our black and coloured material which is always in stock guarantees an elegant result.

---

## Compartment Divider Systems

Dividers come in handy when a large area needs to be compartmentalized.

### Permanently mounted dividers

Permanently mounted dividers prove their worth when the compartments are constantly in use, especially in the professional field. They are indispensable for use as a standard tool case for larger products.

---

### Variable Compartments

Variable compartments can be achieved with simply re-inserting the dividers into the pre-cut increments. This adjustable system ensures safe transport of the case's content. They could be laminated with foam for a safer transport.

## Compartment Divider Systems

### Notch-Insert System

Opposite case walls are lined with notch-insert rigid foam panels, fiber board or deep inserts. According to the needed size of compartments flexible dividers are easily slid into place.

### Organisation Trays

Plastic assortment trays to achieve individual and perfect order for those small items in the case.

Four large coloured trays come as standard accessories. Customized colours, depending on the quantity, allow for limitless organization possibilities.

### Specialised trays

Specialised trays are indispensable for categorizing, organizing and establishing a clear overview for presenting all those small items. There are no limits to the variations.

---

## Panels and Mounting Boards

Panels and mounting boards for safe and protected separation of products in both upper and lower parts of the case. Documents and small items all have their place.

### Lid Panel

The lid panel ensures that all contents remain neatly and safely in place during transport.

---

### Organisation Panel

This panel acts not only to ensure that the contents remain in place but affords a diversity of possibilities for storage of documents and other items.

---

### Tool Panel

Replaceable tool panel - able to be used in the lid as a storage and protection panel.

Either single or double-sided with elastic holding bands or pouches and pockets for tools and work material. Remove the panels and you have a universal case.

## Panels and Mounting Boards

### Cover Panel

A transparent cover panel serves as optimal protection of your products and gives a clear view of your presentation.

### TROLLEY as mounting option

Removable roller systems contain 2 rollers and a multi-level retractable handle. In addition to the previous standard trolley with 50 mm large rollers, KKC offers now a comfort-alternative.

This contains even larger, gummed rollers with a diameter of 120 mm. Thanks to the broadened wheel base the suitability for daily use will be more increased.

Comfort Trolley

Standard Trolley

## Panels and Mounting Boards

### Mounting and Front Boards

For measuring, electrical- or electronic technique the placement and mounting of instruments in case is essential. The case assembly and front board have been designed just for this purpose. The front boards are held in place by sliding nuts as well as angle extrusions with pop rivet nuts.

### Electrical Cabling and Assembly

Electrical cabling and assembly can be expertly carried out according to given plans and parts lists due to complete VDE 0100 certified electrical cabling unit. Instruments and functional parts can be integrated in the printed front board of case.

---

## Drawer Cabinets

Drawers are the professional solution for transporting and presenting small products, product parts or product groups.

A successful presentation is achieved by means of high quality drawer features such as foam inserts, deep recessed inserts or completely tailor-made solutions.

---

### Drawer Cabinets on Rollers

As an added feature we can mount your specialised drawer cabinet on rollers. When size and weight of the drawer cabinet exceed carrying convenience, our roller system is mounted which enhances effortless mobility of the complete cabinet as, for example, a brochure display.

---

## Drawer Cabinets

### Removable Drawers

Not only can these drawers be extended for ideal viewing, but they are easily removed and replaced. Sophisticated and elegant features as well as custom coating bring out the quality of your product.

---

### Drawers with Covers

For special requirements the drawers can be fitted with covers. This ensures a tight hold for content or serves as a display cover should there be a need for keeping certain items out of immediate view.

The drawer covers can be made of the same material as the drawer itself, if desired.

---

### Foam Drawer

The foam drawers are advantageous due to the light-weight rigid foam material reinforced with a bottom panel. Ideal for small and light-weight products.

## ... for every case: Individualising with CI and Promotion.

Use the surface of your case or box to promote your company:

Depending on the choice of surface we offer a wide range of possibilities for your "message", your CI or your market presence to "catch the eye" of your potential customer.

Refine "your" case.

Show your colours; show your competence through identification to your firm. Promote and strengthen your new line of products.

Use your case to penetrate the market.
